
Fact sheet

Objective

Bio-Logical Capital's objective is to help Hawai'i protect its natural environment, develop local sources of food and energy, build a strong and diverse local economy, and grow in a way that supports thriving communities.

Our *Stewardship Development* approach—which blends traditional knowledge with cutting-edge science—is aligned with Hawai'i's values and desire to reconnect people with the land. Our projects unite people with nature through jobs, recreation, restoration work, education programs, smart real estate design, and through the products that healthy nature provides. We feel that this combination will prove successful for shareholders, stakeholders, and the land.

Why Hawai'i

Despite its favorable climate and strong natural resources, Hawai'i currently imports roughly 85% of its food and 90% of its energy. Bio-Logical Capital hopes to implement a *Stewardship Development* approach to help reverse these trends.

By working closely with partners, Bio-Logical Capital is designing productive solutions for Hawai'i in the areas of:

- Sustainable agriculture – growing healthy, local food
- Reliable, clean water stewardship – restoring forests and recycling wastewater
- Far-sighted land management – protecting natural resources and revitalizing communities
- Renewable energy – producing local, clean, affordable power

Our overarching mission is to unleash the power of nature to enrich lives and land. This concept is innate to the Hawaiian people, whose culture is based around living in harmony with the land and within the natural rhythms of the environment.

Commitment to the Islands

Bio-Logical Capital is committed to making long-term investments in projects that heal land, help people, and generate revenue in Hawai'i. Having a physical presence in Hawai'i is just a step in the ongoing process of building and maintaining relationships of trust. When a project comes to fruition, we will be neighbors, collaborators, contributors, and participants for decades to come. Our long-term commitment includes investing in, operating, and owning projects in Hawai'i for a stretch of 20 years or more.

Hawai'i a priority region for investment. Our local team directs the strategy and projects in Hawai'i, with decision-making authority regarding potential partners, investments, and community giving. As a contained landmass, Bio-Logical Capital feels that Hawai'i can be a model to the world for sustainability.

Project Portfolio

Bio-Logical Capital is involved in a full suite of projects, ranging from agriculture to watershed restoration. All of our projects design solutions for issues of sustainability and prosperity.

Bio-Logical Capital is proud to be part of this community, and to partner with the many other organizations and individuals who are working hard to create a brighter future for Hawai'i.

Experienced Team

Bio-Logical Capital's staff bring together business and conservation leaders with more than 200 years of cumulative experience in finance, land planning, design and management, environmental conservation, real estate, agriculture, forestry and communications. Each offer deep technical skills and a conviction that changing the way we live and work with the land must become the economic innovation of our time and our legacy.

The Hawai'i office is led by Guy H. Kaulukukui, who is responsible for implementing Bio-Logical Capital's vision of making long-term investments in projects that heal land, help people, and generate revenue across the Islands. As the former deputy director at the Department of Land and Natural Resources, he is well versed on Hawai'i's environmental issues and challenges. Guy is available for comment to provide his expertise in economics, land and resource management, and community engagement on the topic of stewardship and crafting Hawai'i's sustainable development patterns for the future.
